SSH Academy

SSH (Secure Shell) Home Page

This is the start page for the SSH (Secure Shell) protocol, software, and related information. SSH is a software package that enables secure system administration and file transfers over insecure networks. It is used in nearly every data center and in every large enterprise.

This page was created by the inventor of SSH, <u>Tatu Ylonen</u> (twitter: <u>@tjssh</u>). He wrote ssh-1.x and ssh-2.x, and still works on related topics. The open source OpenSSH implementation is based on his free version.

Download PuTTY

PuTTY is an SSH and telnet client, developed originally by Simon Tatham for the Windows platform. PuTTY is open source software that is available with source code and is developed and supported by a group of volunteers.

Download PuTTY

Below suggestions are independent of PuTTY. They are not endorsements by the PuTTY project.

Bitvise SSH Client

Bitvise SSH Client is an SSH and SFTP client for Windows. It is developed and supported professionally by Bitvise. The SSH Client is robust, easy to install, easy to use, and supports all features supported by PuTTY, as well as the following:

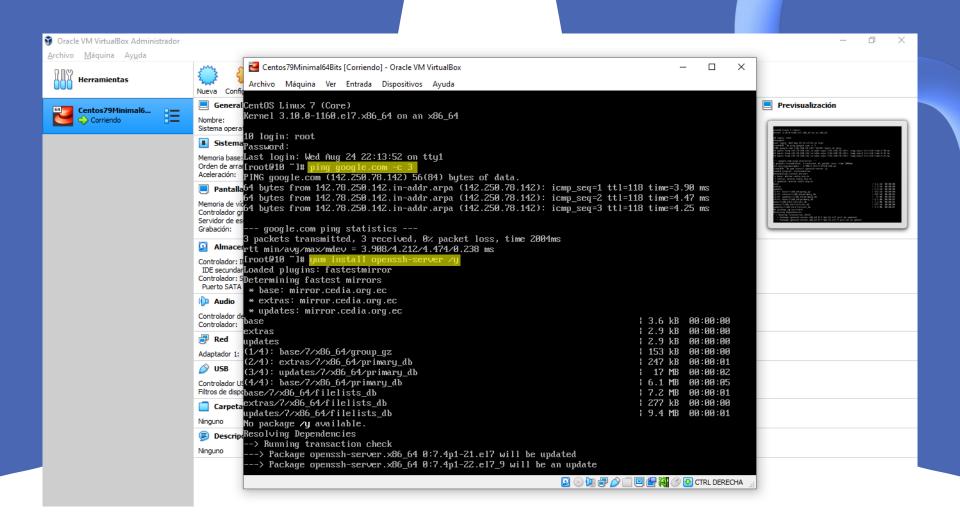

- graphical SFTP file transfer;
- · single-click Remote Desktop tunneling;
- · auto-reconnecting capability;
- · dynamic port forwarding through an integrated proxy;
- · an FTP-to-SFTP protocol bridge.

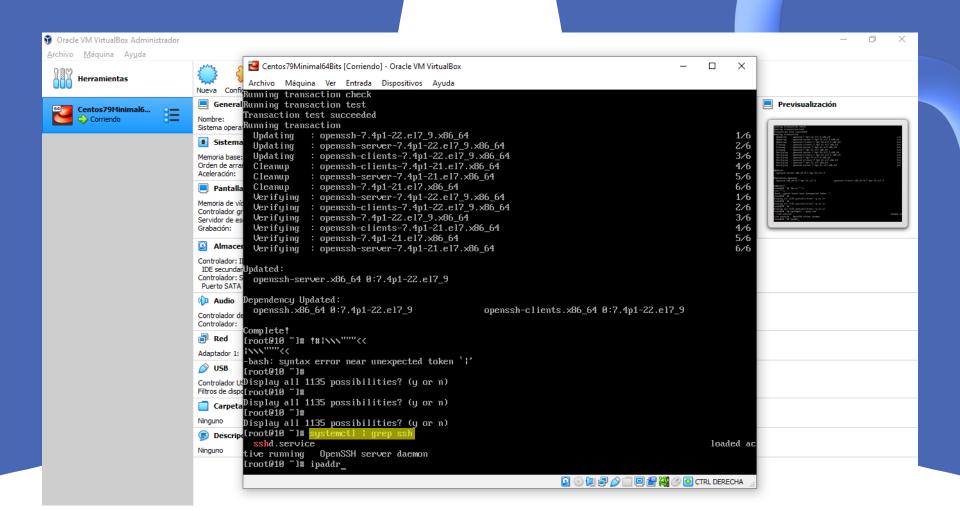

Bitvise SSH Client is free to use.

Install R

These instructions describe how to install R from precompiled binaries on a Linux server.

Do you need to install multiple versions of R?

Our recommended installation instructions for R allow you to make multiple versions of R available, and avoid replacing existing versions of R when updating system packages.

Install required dependencies

To install the necessary runtime dependencies for R, you will need to enable additional repositories for third-party or source packages by using the following commands:

RHEL 8 Ubuntu/Debian RHEL/CentOS 7

- # Enable the Extra Packages for Enterprise Linux (EPEL) repository
- \$ sudo yum install https://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noa
- # On RHEL 7, enable the Optional repository
- \$ sudo subscription-manager repos --enable "rhel-*-optional-rpms"
- # If running RHEL 7 in a public cloud, such as Amazon EC2, enable the

Download Shiny Server for Red Hat/CentOS 7+

We currently only provide a pre-built binary for the 64 bit architecture. Running on other architectures or versions will require building from source.

Before installing Shiny Server, you must install R and the Shiny R package. To install R, you can use the Extra Packages for Enterprise Linux (EPEL) repository. If you don't already have this repository available you should add it to your system using the instructions found on the Fedora EPEL website.

After enabling EPEL you should then ensure that you have installed the version of R available from EPEL. You can do this using the following command:

sudo yum install R

Overview

Welcome to the homepage of FileZilla®, the free FTP solution. The FileZilla Client not only supports FTP, but also FTP over TLS (FTPS) and SFTP. It is open source software distributed free of charge under the terms of the GNU General Public License.

We are also offering <u>FileZilla Pro</u>, with additional protocol support for WebDAV, Amazon S3, Backblaze B2, Dropbox, Microsoft OneDrive, Google Drive, Microsoft Azure Blob and File Storage, and Google Cloud Storage.

Last but not least, FileZilla Server is a free open source FTP and FTPS Server.

Support is available through our forums, the wiki and the bug and feature request trackers.

In addition, you will find documentation on how to compile FileZilla and nightly builds for multiple platforms in the development section.

Quick download links

Pick the client if you want to transfer files. Get the server if you want to make files available for others.

News

♦ 2022-07-29 - FileZilla Server 1.5.1 released

Bugfixes and minor changes:

- OF Fixed a crash if a session is closed and the data connection receives a connection error at the same time
- MSW: The notification area icon now displays again in all display scale factors
- O Admin UI: Fixed switching from "Use system credentials to log in" to "Require a password to log in" not applying
